

The microblade is flexible and conforms to irregular shapes

microblade

high and low pile microfibre duster

The lightweight Microblade reduces worker fatigue and the Kwik™ system extendable handle can be adjusted to reach high and low places with safety and ease in mind. The Microblade bends to fit curved surfaces or can be used flat to increase coverage and cleaning efficiency. The sleeves are available in high and low pile microfibre and ultrafibre versions. The high pile microfibre is used as a dry duster on smooth and textured surfaces. The low pile ultrafibre can be used dry or damp to dust and wipe smooth surfaces.

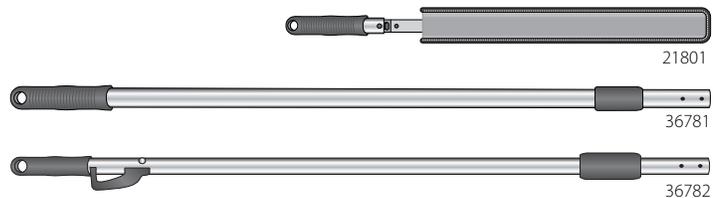

features and benefits

- Flexible blade can be used flat or sculpted to conform to curved and irregular surfaces.
- The Microblade is interchangeable with our popular Kwik™ system handles.
- Tool is more ergonomic than using cloths.
- Sleeves can be laundered with other microfibre based products.
- Low profile design is perfect for cleaning in tight spaces.

technical data

high pile	microfibre
low pile	ultrafibre
blade	flexible head with high density closed cell foam
handle	aluminum, extendable

product	cm	description	pack
21801	55	flexible Microblade handle	5
